Nexmancer Website Audit & Modernization Plan

Nov 7, 2026 · @Sathish Gunasekaran

Executive summary

The site is well built and looks premium, but it doesn't yet sell. It reads as a showcase of five side products, not as a consultancy a buyer can hire. Search engines and LinkedIn can't see its content. The main contact path is an email link. And several proof points can't be verified.

Fix these five things first, in this order:

1. **Make the site crawlable.** It's a client-rendered React app, so crawlers and link previews see only a two-line fallback. Pre-render the HTML at build time.
2. **Pick one positioning and lead with services.** Today the hero sells "5 live platforms". A buyer looking for a partner needs "what you'll do for me, for whom, and how" in the first screen.
3. **Make the proof verifiable.** The three case studies are anonymous, with very precise metrics (for example "<0.8% hallucination"). If they aren't documented client work you can stand behind, take them down. Replace them with your own product builds, written up honestly.
4. **Add people.** No founder, team or LinkedIn link appears anywhere. For a young consultancy, the founders *are* the trust signal.
5. **Replace mailto with a real booking flow.** Use a scheduler for discovery calls and a contact form that actually posts, with a confirmation and a reply-time promise.

Audit basis: the GitHub repo at its latest commit (2 Nov 2026), built and rendered locally. I also read the HTML that nexmancer.com serves to crawlers. I couldn't load the live page in a full browser from here, so live-only settings (contact endpoint, hosting headers) are marked "check".

What's there today

It's a single long page: 10 sections, about 14,100 px tall on desktop and 23,500 px on a phone. It's built with React 19, Vite 7 and Tailwind 4, with a dark/light theme. The visual craft is strong: a consistent dark "deep-tech" look, custom SVG diagrams, accessible

markup (skip link, alt text, labelled controls) and no horizontal scroll on mobile.

#	Section	Headline on page	Job it does today
1	Hero	Building what's next.	Lists 5 products as "live platforms"
2	Technology	Technology, engineered.	5 domains: software, AI, security, data, cloud
3	Methodology	From idea to product.	6-step research-to-scale pipeline
4	Products	We build products, not just projects.	5 product cards (Sensighty, SigmaSec, LibraDigit, AskMyDocs, Hyperlocal Heat)
5	Case studies	Engineered. Tested. Measurably proven.	3 anonymous engagements with metrics
6	AI × Security	Intelligence meets security.	Architecture diagram
7	Solutions	Engineered for real-world impact.	The same 5 products again, plus 3 engagement models
8	Global	Built in India. Designed for the world.	Dot-matrix world map
9	About	A deep-tech studio built on first principles.	Principles, stats, capabilities
10	Contact	Have a hard tech problem?	Form + mailto "Book 15m call"

The five products appear four times: hero, Products, Solutions and Contact. The three engagement models, which are the actual consulting offer, sit in section 7, about 60% of the way down the page.

Gaps

The biggest gaps are in positioning, proof and the contact path, not in visual design.

Positioning and messaging

- **Studio or consultancy?** The page calls Nexmancer a "deep-tech product studio & applied R&D". It then offers "Embedded R&D squads" and "Security audits". A buyer can't tell whether you sell products, services or both. The company charter keeps

advisory separate from products; the site should too.

- **The headline says nothing specific.** "Building what's next" could belong to any company. The sub-line lists technologies ("deterministic AI systems, automated cybersecurity platforms…") rather than outcomes for a named buyer.
- **No defined customer.** The page never says who it's for: Indian SMEs, funded startups, edtech, universities, regulated enterprises?
- **Five domains plus five unrelated products** (edtech, security, archives, RAG, climate) read as breadth without focus. Pick two or three flagship offers and let the rest support them.
- **Charter pillars are missing.** Quantum readiness and secure architecture, two of the charter's three pillars, don't appear on the site at all.
- **Headings are all-caps slogans,** for example "ENGINEERED. TESTED. MEASURABLY PROVEN." Ten of them in a row make the page feel loud and hard to scan.

Proof and trust

- **Case studies can't be checked.** There are three engagements with no client name, quote, date or link, yet very precise numbers ("2.4s, reduced from 45 minutes", "0 cross-tenant leaks"). Experienced buyers discount this, and diligence will ask for references. Only keep what you can evidence.
- **No people.** No founders, no team, no LinkedIn company page, no headshots. The only named person is the lead developer, in a hidden browser-console message.
- **Products look like prototypes.** Four of the five "Live" products link to `*.vercel.app` subdomains. Put them on `nexmancer.com` subdomains (as Sensighty already is) or label them as demos.
- **Self-scored stats.** "100% First-Principles", "Zero Data Leakage" and "100% Portable Stack" are claims, not evidence. Swap them for checkable facts: year founded, registered company details, products shipped, open-source repos.
- **Missing basics buyers check:** company registration details (CIN/GSTIN), a phone or WhatsApp number, a LinkedIn link, and real Privacy and Terms pages. Today these are short in-page pop-ups.

Conversion

- **"Book discovery call" opens the visitor's email app.** On many work laptops and phones this fails or does nothing. A scheduler (Cal.com or Calendly) converts far better.

- **The contact form may not send.** If `VITE_CONTACT_ENDPOINT` isn't set, the form tells visitors "Online delivery isn't connected yet". *Check:* submit a test on the live site.
- **There are 25+ calls to action** with no hierarchy (Explore products, Book call, Inquire, Launch ×5, Partner with us, Transmit message…). There should be one primary action (book a call) and one secondary (see work).
- **No reason to act now** and nothing for visitors who aren't ready: no free audit, checklist, newsletter or pricing guide.
- **No analytics or conversion tracking** beyond Vercel Speed Insights, so you can't measure what works.

Technical, SEO and performance

- **Invisible to search and social.** The app renders in the browser. Crawlers and the LinkedIn, X and WhatsApp preview bots get only the `<noscript>` text (an H1, one sentence and an email). Google renders JavaScript eventually, but late and unreliably, and other crawlers and AI search tools often don't.
- **One page means one ranking URL.** The sitemap has a single URL. There's no page per service, product or case study to rank for searches like "AI development company Coimbatore" or "security audit India".
- **Everything is inlined into one 413 KB HTML file** (116 KB gzipped) by `vite-plugin-singlefile`. Nothing can be cached between visits, and the whole app must download before first paint.
- **Security headers may not apply.** They're in `public/_headers`, a Netlify/Cloudflare format, but the site uses Vercel Speed Insights, which suggests Vercel hosting, and Vercel ignores `_headers`. *Check* the live response headers.
- **Schema has gaps.** The Organization `logo` points to an SVG favicon (Google needs a raster image of at least 112 px). `sameAs` lists a personal repo but no LinkedIn.
- **Heavy motion.** There's an always-running particle canvas, a scroll-progress bar and rotating hero text. Check that they respect the reduced-motion setting, and their battery cost on mobile.

Essential features for a modern tech consultancy

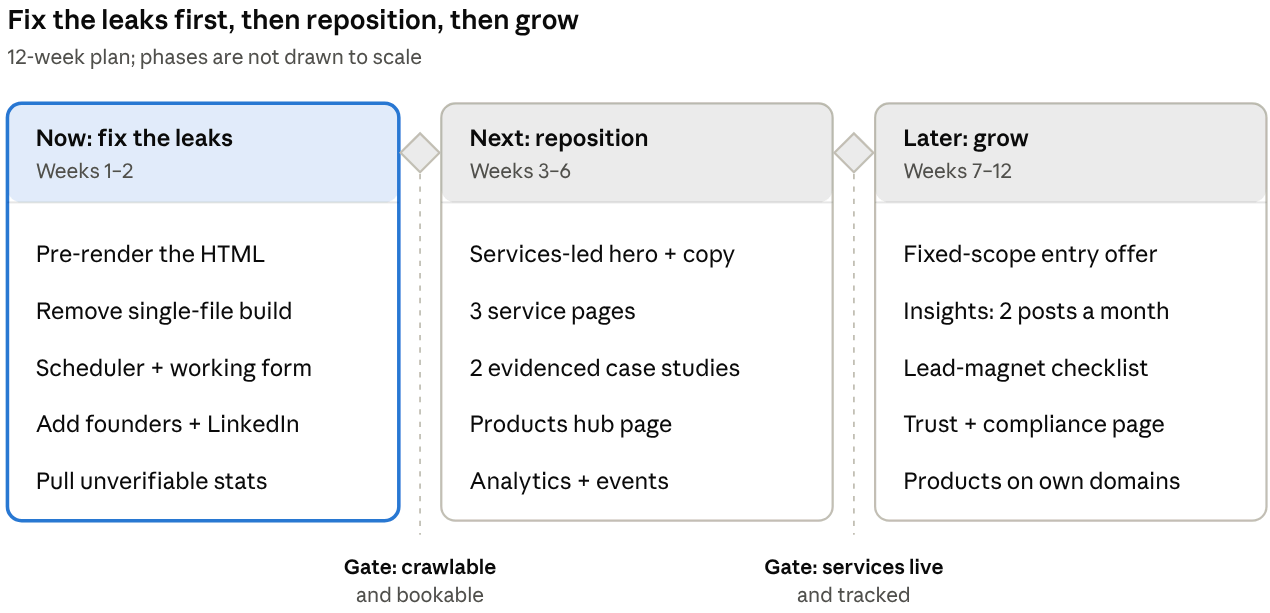

Buyers now shortlist on evidence and specificity: named outcomes, real people, and a page that answers their exact search. These are the features that do that work, most important first.

Feature	What it looks like for Nexmancer	Why it matters
Outcome-led hero	"We build secure AI products and audit the systems you already run" + who it's for + one button: "Book a 30-min call"	Visitors decide in seconds whether you fit
Service pages (one URL each)	`/services/ai-product-engineering`, `/services/security-architecture-audit`, `/services/quantum-readiness` — scope, deliverables, timeline, starting price or range	Ranks for buyer searches; answers "what exactly do I get?"
Verifiable case studies	Real builds (Sensighty, SigmaSec) written as problem → approach → result, with screenshots, a live link and dates	Proof a buyer can click, not numbers they must trust
Founders & team	Photos, roles, LinkedIn, one-line credentials (e.g. IIT Madras, security and cryptography background)	People buy consulting from people
Fixed-scope entry offer	e.g. "AI readiness sprint — 2 weeks" or "Security architecture review — fixed fee"	Lowers the risk of a first purchase; the most common consultancy converter
Real booking + form	Cal.com/Calendly embed; form that posts to email/CRM with a confirmation and "we reply within 1 business day"	Removes mailto friction; sets expectations
Engagement models + pricing signal	Sprint / retainer / team extension, with "from ₹…" or typical ranges	Qualifies leads and saves both sides time
Insights / blog	1–2 practical posts a month: AI security, RAG in production, PQC migration, IRT assessments	Search traffic, LinkedIn content, shows expertise
Lead magnet	Free checklist, e.g. "Post-quantum readiness checklist for Indian enterprises"	Captures visitors who aren't ready to talk yet

Feature	What it looks like for Nexmancer	Why it matters
Trust & compliance page	Security practices, data handling, NDA-first, company registration, DPDP Act stance	Required by enterprise and regulated buyers
Products hub	One `/products` page linking each product on its own domain, with clear Live / Beta / Demo labels	Keeps products as proof without hijacking the services story
Analytics & tracking	Privacy-friendly analytics (Plausible or Umami) + events for booking, form and outbound clicks	You can't improve what you don't measure

Prioritized roadmap

Spend the first two weeks on fixes that cost little and stop losing visitors. Then reposition around services before investing in content.

12-week roadmap · 3 phases, 2 gates

Don't start a phase until the previous gate is met. "Crawlable and bookable" means a link shared on LinkedIn shows a proper preview and a test booking reaches your inbox. "Services live and tracked" means each service has its own page and analytics records bookings.

Codebase fixes

Most fixes are small. The one structural change is moving from a single-page app to pre-rendered, multi-page output.

File	Change	Effort
`vite.config.ts`	Remove `viteSingleFile()` so JS and CSS ship as cacheable, hashed files	5 min
`vite.config.ts` / `package.json`	Pre-render to static HTML: migrate to Astro (best fit for a content site, keep React for the interactive parts) or add `vite-react-ssg`. Each route becomes a real HTML page	2–4 days
`src/App.tsx`, `src/lib/site.ts`	Split into routes: `/`, `/services/*`, `/work/*`, `/products`, `/about`, `/insights/*`, `/contact`. Change `NAV` from `#anchors` to real paths	1–2 days
`src/data/content.ts`	Rewrite the hero and section copy around services. Replace `CASE_STUDIES` with evidenced work. Drop the self-scored metrics in `ETHOS_PRINCIPLES` and `ABOUT_STATS`. Add `TEAM` and `SERVICES` arrays	1–2 days
`src/components/Hero.tsx`	One primary CTA (book a call), one secondary (see work). Move the product carousel out of the hero	0.5 day
`src/lib/site.ts`	Replace `scheduleMailto` with a scheduler URL. Add `linkedin` and `phone`	1 hr
`src/lib/contact.ts` + host env	Set `VITE_CONTACT_ENDPOINT` (Formspree, Web3Forms, or a serverless function that emails you and logs to a sheet/CRM). Add a success state with the reply time	2 hr

File	Change	Effort
`public/_headers`	If hosted on Vercel, move the headers into `vercel.json` (`headers` array). Add the scheduler and analytics origins to the CSP	1 hr
`index.html`	Set the Organization `logo` to a PNG (≥112 px). Add LinkedIn to `sameAs`. Move the personal repo out of `sameAs`. Per-page titles and descriptions once routes exist	1 hr
`public/sitemap.xml`	Generate at build time from the routes	1 hr
`src/components/Footer.tsx`	Move Privacy, Terms and Engagement from pop-up text to real `/privacy` and `/terms` pages. Add CIN/GSTIN and registered address	0.5 day
`src/components/NetworkCanvas.tsx`	Pause the animation when it's off-screen or the tab is hidden. Skip it when reduced motion is on	1 hr
`src/utils/consoleSignature.ts`	Optional: keep it, but credit the team on an About page too, where buyers will actually see it	—
`src/data/content.ts` (`PRODUCTS`)	Move the four `*.vercel.app` products to `*.nexmancer.com` subdomains, or label them "Demo". Point Sensighty at its launch page	1 hr + DNS
